

Winning space race with data science

Shahira Najia Jamil 29 April 2024

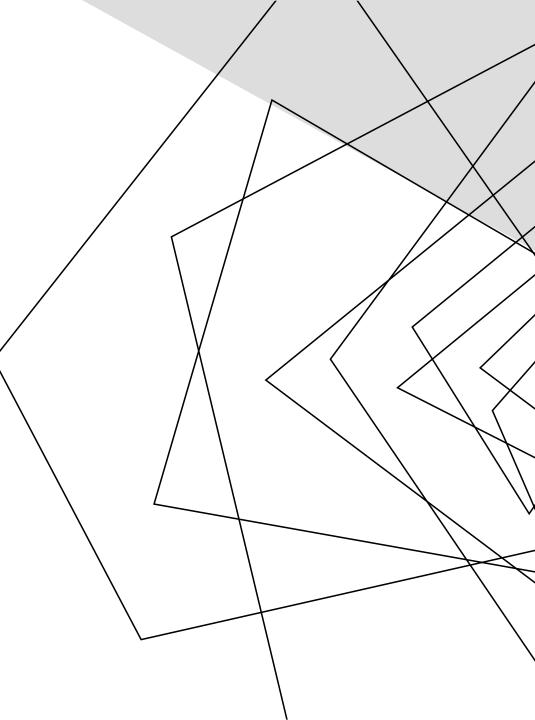

Executive Summary

Summary of methodologies

Data was collected from the SpaceX public API and publically available data on Wikipedia. Data wrangling included extracting launch outcome information to serve as the dependent variable in the Machine Learning models. SQL queries and data visualizations (static plots, interactive maps, and an interactive dashboard) were created to discover insights about the data set and answer questions. Predictive analysis was pursued using Logistic Regression, SVM (Support Vector Machine), Decision Tree, and KNN (k-Nearest Neighbors) Machine Learning models.

Summary of all results

Machine learning models on the data set were performed equally. Launch data included information about flight number, date of launch, payload mass, orbit type, launch site, mission outcome and other variables. Logistic Regression, SVM (Support Vector Machine), and KNN (k-Nearest Neighbors).

Introduction

Having undertaken the role of a Data Scientist, I have been tasked to predict if the Falcon 9 first stage will land successfully. SpaceX advertises Falcon 9 rocket launches on its website with a cost of US\$62 million. Other provider's cost is around US\$ 165 million each, much of the which due to the first stage reuse by SpaceX. The first stage is determined through successful rocket landings and the factors that contributed to the success or failure. This presentation aims at understanding the launch performances of Falcon 9 that are also applied to other rockets, where Data Science have been useful in improving the future space exploration endeavours.

Problems

Firstly, we develop the problem statements to ascertain the objective of this project and they are as such:

- Conditions will the rocket be able to land safely
- Effects of each relationship of rocket variables on outcome
- Criteria that will aid SpaceX to achieve best results

Methodology

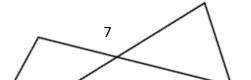

Executive Summary

• Data collection methodology:

Data is compiled through SpaceX API and web scrapping from Wikipedia. Data was cleaned to prepare for visualisation, queries and machine learning model creation

• Perform data wrangling

One hot encoding data fields for machine learning and dropping irrelevant columns (Transforming data for Machine Learning).

Methodology (cont'd)

- Perform exploratory data analysis (EDA) using visualization and SQL Visualisations such as scatter and bar plots that show data behaviour
- Perform interactive visual analytics using Folium and Plotly Dash Such as Folium and Plotly Dash visualization
- Perform predictive analysis using classification models
 Develop and assess classification models

8

Data collection

Data collection entails information gathering process from an established system. Collected data is used to Explanation relevant questions and evaluated the outcomes. Data collection process for this project includes using get request to the SpaceX API. Data is decoded the response content as a Json using .json() function call and turn it into a pandas dataframe using .json_normalize(). Data undergoes cleaning and checked for missing values and fill in missing values where necessary. Then, web scraping is performed from Wikipedia for Falcon 9 launch records with BeautifulSoup. The objective is to extract the launch records as HTML table, parse the table and convert it to a pandas data frame for future analysis.

Data Collection – SpaceX API

SpaceX API Calls Flowchart

Place call to API

Extract nested data and convert the data format

Utilise defined functions to develop specific data columns

Combine separate columns into a DataFram

Filter out all launches with rockets that are not the Falcon 9

The SpaceX API has data available publicly. Once a GET request has been made to the SpaceX API and the response received, the data can be recorded into a Pandas DataFrame for further analysis.

Project/blob/main/Week%201(A)%20Data%20col lection%20API%20checkpoint.ipynb

Data Collection – Scraping

Web Scraping Flowchart

Wikipedia contains tables of data about SpaceX launches. These tables were scraped to extract launch data that were placed into a Pandas DataFrame for further analysis.

GitHub URL (Web Scraping):

https://github.com/snajiajamil/SpaceX-Data-Science-

Project/blob/main/Week%201(B)%20Data%20Col lection%20with%20Web%20Scraping%20lab.ipyn b

Data Wrangling

The .csv file from the first section contains the data that needed to be cleaned. The launch sites, orbit types and mission outcomes were cleaned up. The handful of mission outcome types were converted to a binary classification where 1 means that the Falcon 9 first stage landing was a success and "o" means that it was a failure. The new classification was added to the DataFrame for further analysis.

EDA with Data Visualisation

- The following charts were created to look at Launch Site trends
 Scatterplot to see mission outcome relationship split by Launch Site and Flight Number.
 Scatterplot to see mission outcome relationship split by Launch Site and Payload.
- The following charts were created to look at Orbit Type trends.
 Bar chart to see mission outcome relationship with Orbit Type.
 Scatterplot to see mission outcome relationship split by Orbit Type and Flight Number.
 Scatterplot to see mission outcome relationship split by Orbit Type and Payload.
- The following chart was created to look at trends based on time. Line plot to see mission outcome trend by year.

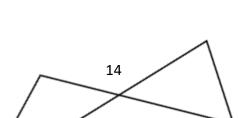

GitHub URL (EDA with Data Visualisation): https://github.com/snajiajamil/SpaceX-Data-Science-Project/blob/main/Week%202(B)%20EDA%20with%20Visualisation%20lab.pdf

EDA with SQL

Queries were written to extract information about:

- Launch sites
- Payload masses
- Dates
- Booster types
- Mission outcomes

GitHub URL (EDA with SQL): https://github.com/snajiajamil/SpaceX-Data-Science-Project/blob/main/Week%202(A)%20EDA%20with%20SQL%20(2).ipynb

Build an Interactive Map with Folium

Markers, circles and lines were added to the Folium map for the reasons below:

- Markers for launch sites and for the NASA Johnson Space Center
- **Circles** for the launch sites.
- **Lines** to show the distance to the nearby features:
 - Distance from CCAFS LC-40 to the coastline
 - Distance from CCAFS LC-40 to the rail line
 - Distance from CCAFS LC-40 to the perimeter road

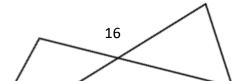

GitHub URL (Folium Maps): https://github.com/snajiajamil/SpaceX-Data-Science-
Project/blob/main/Week%203A%20Interactive%20Visual%20Analytics%20with%20Folium%20lab.pdf

Build a Dashboard with Plotly Dash

- The input dropdown is used to select one or all launch sites for the pie chart and scatterplot.
- The pie chart displays one of two things:
 - (1) For All Sites the distribution of successful Falcon 9 first stage landings between the sites
 - (2) For One Site the distribution of successful and failed Falcon 9 first stage landings for that site
- The input slider is used to filter the payload masses for the scatterplot.
- The scatterplot displays the distribution of Falcon 9 first stage landings split by payload mass, mission outcome and by booster version category.

GitHub URL (Dashboard File): https://github.com/snajiajamil/SpaceX-Data-Science-Project/blob/main/Week%203(B)Plotly%20Dash.py

Predictive Analysis (Classification)

The dataset was split into training and testing sets. Logistic Regression, SVM (Support Vector Machine), Decision Tree, and KNN (k-Nearest Neighbors) machine learning models were trained on the training data set. Hyper-parameters were evaluated using GridSearchCV() and the best was selected using '.best_params_'. Using the best hyper-parameters, each of the four models was scored on accuracy by using the testing data set.

DataFrame was developed with cleansed data **Machine Learning Flowchart**

Each of the four models was trained via training dataset

The data was split into training and testing sets

Models were compared according to accuracy results

Each of the four models was

Results

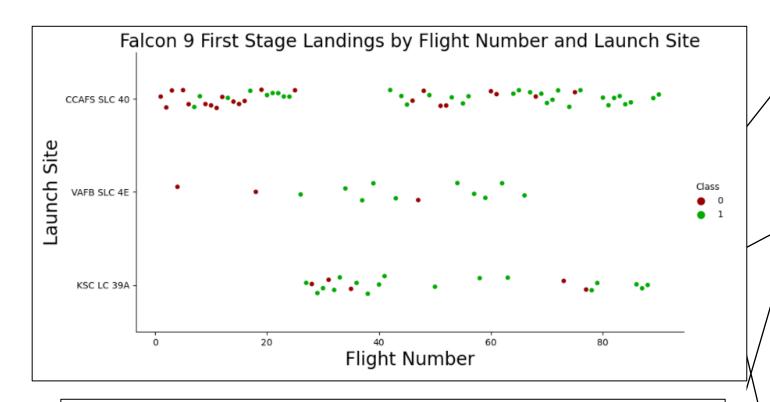

- Exploratory data analysis results
- Interactive analytics demo in screenshots
- Predictive analysis results

Flight Number vs. Launch Site

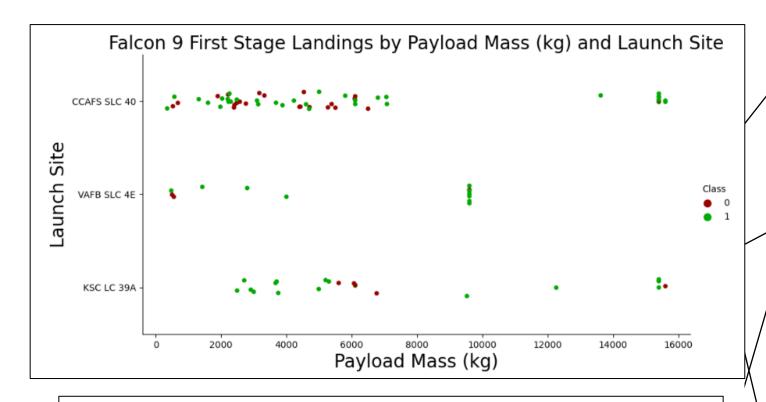

- Success rate varies noticeably with launch site.
- Successful Falcon 9 first stage landings appear to become more prevalent as the flight number increases.

Falcon 9 first stage failed landings are indicated by the '0' class (red markers) and successful landings by the '1' class (green markers)

Payload vs. Launch Site

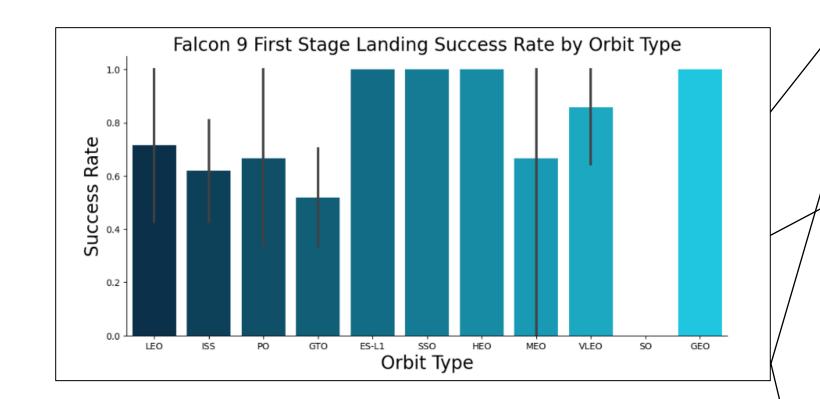

- For the CCAFS SLC 40 launch site, the payload mass and the landing outcome appear to not be strongly correlated.
- The failed landings at the KSC LC 39A launch site are all grouped around a narrow band of payload masses.

Falcon 9 first stage failed landings are indicated by the '0' class (red markers) and successful landings by the '1' class (green markers)

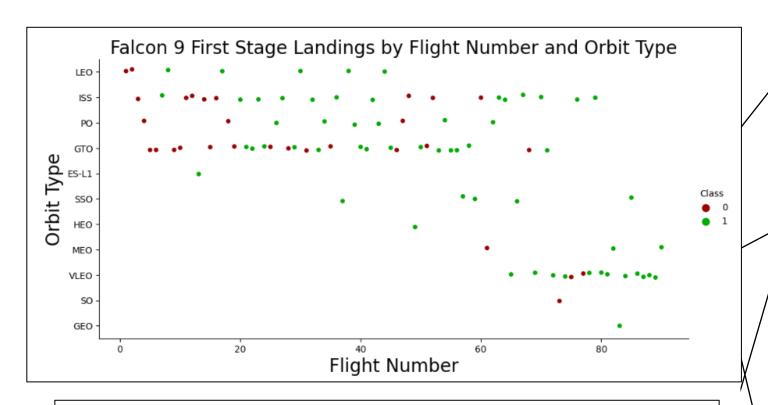

Success Rate vs. Orbit Type

- ES-L1, SSO, HEO and GEO orbits have no failed first stage landings.
- SO orbits have no successful first stage landings.

Flight Number vs. Orbit Type

 There is a correlation between flight number and success rate with larger flight numbers being associated with higher success rates

Falcon 9 first stage failed landings are indicated by the '0' class (red markers) and successful landings by the '1' class (green markers)

Payload vs. Orbit Type

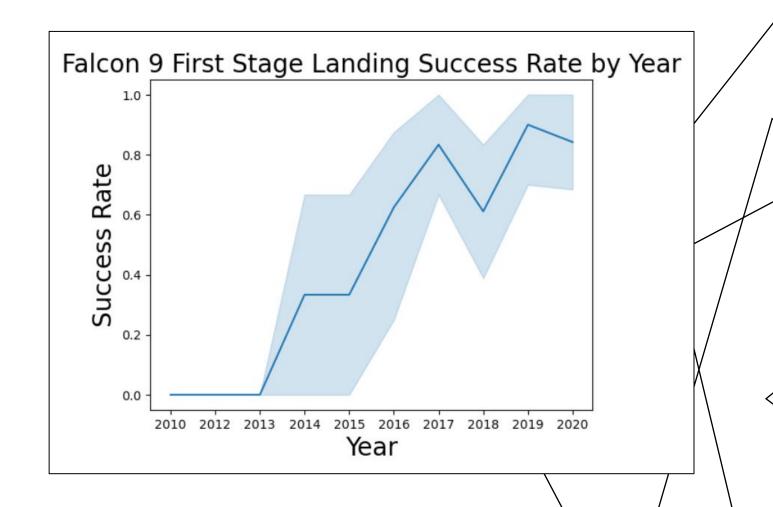

- Some orbit types have better success rates than others.
- Success rate appears to have no obvious correlation with payload mass.

Falcon 9 first stage failed landings are indicated by the '0' class (red markers) and successful landings by the '1' class (green markers)

Launch Success Yearly Trend

• The trend shows the increasing success rate that appears to be significant over the years.

All Launch Site Names

- Question: What are the names of the unique launch sites?
- Query: SELECT DISTINCT LAUNCH_SITE FROM SPACEXDATASET;
- Result:

launch_site
CCAFS LC-40
CCAFS SLC-40
KSC LC-39A
VAFB SLC-4E

• Explanation: There are four unique launch sites.

Launch Site Names Begins with 'CCA'

- Task: Find 5 records with launch sites that begin with `CCA`.
- Query: SELECT * FROM SPACEXDATASET WHERE launch_site LIKE 'CCA%' LIMIT 5;
- Result:

DATE	time_utc_	booster_version	launch_site	payload	payload_mass_kg_	orbit	customer	mission_outcome	landing_outcome
2010-06-04	18:45:00	F9 v1.0 B0003	CCAFS LC-40	Dragon Spacecraft Qualification Unit	0	LEO	SpaceX	Success	Failure (parachute)
2010-12-08	15:43:00	F9 v1.0 B0004	CCAFS LC-40	Dragon demo flight C1, two CubeSats, barrel of Brouere cheese	0	LEO (ISS)	NASA (COTS) NRO	Success	Failure (parachute)
2012-05-22	07:44:00	F9 v1.0 B0005	CCAFS LC-40	Dragon demo flight C2	525	LEO (ISS)	NASA (COTS)	Success	No attempt
2012-10-08	00:35:00	F9 v1.0 B0006	CCAFS LC-40	SpaceX CRS-1	500	LEO (ISS)	NASA (CRS)	Success	No attempt
2013-03-01	15:10:00	F9 v1.0 B0007	CCAFS LC-40	SpaceX CRS-2	677	LEO (ISS)	NASA (CRS)	Success	No attempt

• Explanation: This sampling mechanism is used to gather pattern of the data from the database table. Launch Site Names That Begin with 'CCA' SELECT * FROM SPACEXDATASET WHERE launch_site LIKE 'CCA%' LIMIT 5;

Total Payload Mass

- Question: What is the total payload mass carried by booster from Nasa
- Query: SELECT sum(payload_mass__kg_) AS "Total Payload Mass (kg)" FROM SPACEXDATASET WHERE customer LIKE '%NASA (CRS)%';
- Result:

Total Payload Mass (kg)
48213

• Explanation: The total payload carried by boosters from NASA is 48,213 kg

Average Payload Mass by F9 v1.1

- Question: What is the average payload mass carried by booster version F9 v1.1?
- Query: SELECT sum(payload_mass__kg_) / count(payload_mass__kg_) AS "Average Payload Mass (kg)" FROM SPACEXDATASET WHERE booster_version LIKE 'F9 v1.1';
- Result:

Average Payload Mass (kg)
2928

• Explanation: The average payload mass carried by booster version F9 v1.1 is 2,928 kg

First Successful Ground Landing Date

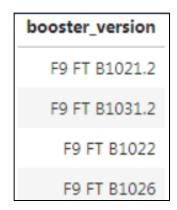

- Question: On which date did the first successful landing outcome on ground pad occur?
- Query: SELECT min(DATE) AS "First Successful Landing Outcome Date" FROM SPACEXDATASET
 WHERE landing outcome LIKE 'Success (ground pad)';
- Result:

First Successful Landing Outcome Date
2015-12-22

• Explanation: The first successful landing outcome on ground pad occurred on 22 December 2015.

Successful Drone Landing with Payload between 4000 and 6000

- Question: What are the names of the boosters which have successfully landed on drone ship and had a payload mass greater than 4000 but less than 6000?
- Query: SELECT DISTINCT booster_version FROM SPACEXDATASET WHERE landing__outcome = 'Success (drone ship)' and payload_mass__kg_ BETWEEN 4000 and 6000;
- Result:

• Explanation: The four booster versions that have successfully landed on drone ship with a payload mass greater than 4,000 kg but less than 6,000 kg are listed above.

Total Number of Successful and Failure Mission Outcomes

- Question: What was the total number of successful and failed mission outcomes?
- Query: SELECT (SELECT count(*) FROM SPACEXDATASET WHERE lcase(landing_outcome) LIKE '%success%') AS "Success", count(*) AS "Failure" FROM SPACEXDATASET WHERE lcase(landing_outcome) NOT LIKE '%success%';
- Result:

Success	Failure
61	40

• Explanation: There were 61 successful and 40 failed mission outcomes

Boosters Carried Maximum Payload

- Question: What were the names of the boosters which have carried the maximum payload mass?
- Query: SELECT booster_version, payload_mass__kg_ FROM SPACEXDATASET WHERE payload_mass__kg_ = (SELECT max(payload_mass__kg_) FROM SPACEXDATASET);
- Result:

booster_version	payload_masskg_
F9 B5 B1048.4	15600
F9 B5 B1049.4	15600
F9 B5 B1051.3	15600
F9 B5 B1056.4	15600
F9 B5 B1048.5	15600
F9 B5 B1051.4	15600
F9 B5 B1049.5	15600
F9 B5 B1060.2	15600
F9 B5 B1058.3	15600
F9 B5 B1051.6	15600
F9 B5 B1060.3	15600
F9 B5 B1049.7	15600

Explanation: The maximum payload mass carried is 15,600 kg. Twelve separate Falcon 9 boosters carried this amount of payload mass.

2015 Launch Records

- Task: List the failed landing_outcomes in drone ship, their booster versions, and launch site names for records in year 2015.
- Query: SELECT MONTHNAME(DATE) AS "Month", landing__outcome, booster_version, launch_site FROM SPACEXDATASET WHERE landing__outcome = 'Failure (drone ship)' AND YEAR(DATE) = 2015;
- Result:

Month	landing_outcome	booster_version	launch_site
January	Failure (drone ship)	F9 v1.1 B1012	CCAFS LC-40
April	Failure (drone ship)	F9 v1.1 B1015	CCAFS LC-40

• Explanation: There were two failed landing outcomes with a drone ship in 2015. Both launched from CCAFS LC-40 - one occurred in January and the other in April.

Rank Landing Outcomes between 2010-06-04 and 2017-03-20

- Task: Rank the count of landing outcomes (such as Failure (drone ship) or Success (ground pad)) between the date 2010-06-04 and 2017-03-20, in descending order.
- Query: SELECT landing__outcome, count(landing__outcome) AS "Count" FROM SPACEXDATASET WHERE DATE BETWEEN '2010-06-04' AND '2017-03-20' GROUP BY landing__outcome ORDER BY count(landing__outcome) DESC;
- Result:

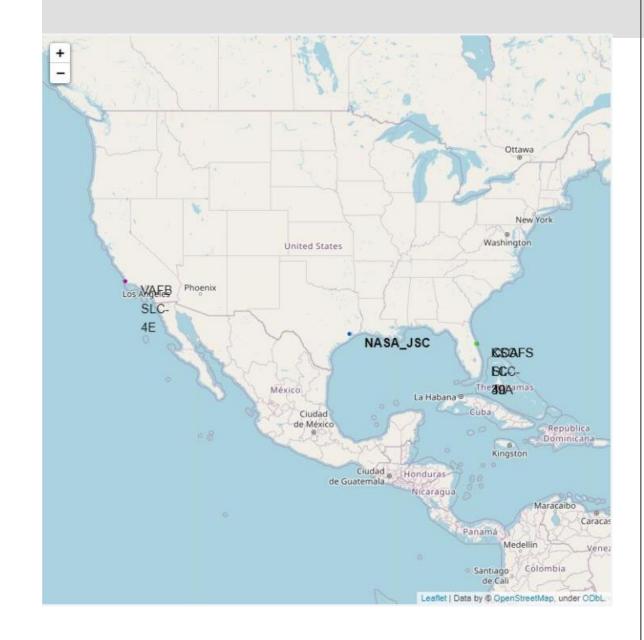

landing_outcome	Count
No attempt	10
Failure (drone ship)	5
Success (drone ship)	5
Controlled (ocean)	3
Success (ground pad)	3
Failure (parachute)	2
Uncontrolled (ocean)	2
Precluded (drone ship)	1

• Explanation: The above list shows the outcomes in descending order. The most common landing outcome was 'not attempted'.

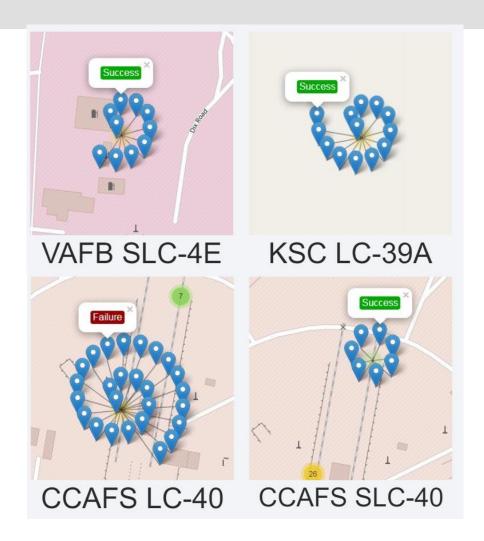

Falcon 9 Launch Site Locations

- CCAFS LC-40 (Florida, USA)
 Cape Canaveral Air Force Station Launch
 Complex 40
- CCAFS SLC-40 (Florida, USA)
 Cape Canaveral Air Force Station Space Launch
 Complex 40
- VAFB SLC-4E (California, USA)
 Vandenberg Air Force Base Space Launch
 Complex 4E
- KSC LC-39A (Florida, USA)
 Kennedy Space Center Launch Complex 39A

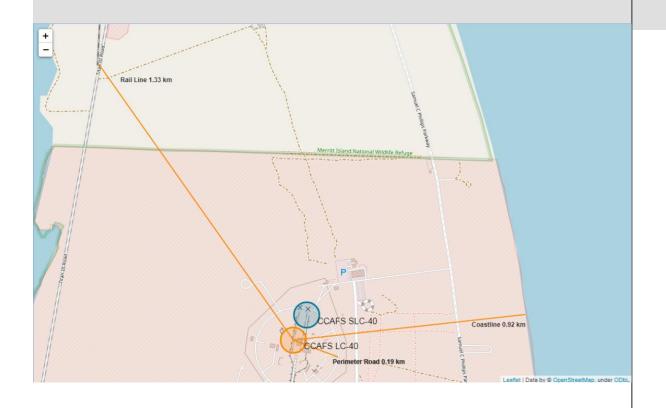

Success/ Failure Landings Markers

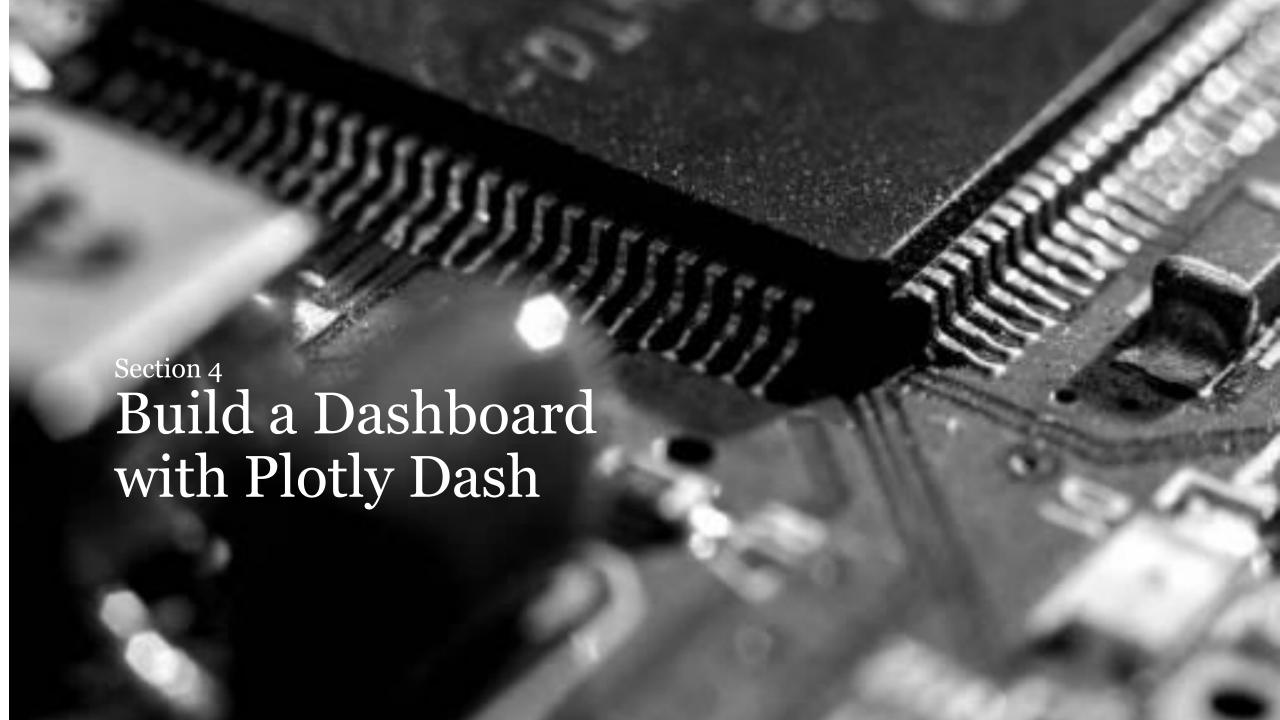

- The markers (success/failure) show the mission outcomes for Falcon 9 first stage landings. They are categorised according to the geographical coordinates for the purpose of the launch.
- The relative number of green success markers to red failure markers indicate the launch site's success rate for Falcon 9 first stage landings.

Distance of Launch Sites to Proximities

- The CCAFS LC-40 and CCAFS SLC-40 launch sites have coordinates that are close but and opposite to each other.
- The rail line is 1.33 km away from CCAFS LC-40.
- The perimeter road around CCAFS LC-40 is 0.19 km away from the launch site coordinates.
- The coastline is 0.92 km away from CCAFS LC-40.
- The distance is appropriate for the launch pads where rockets were launched.

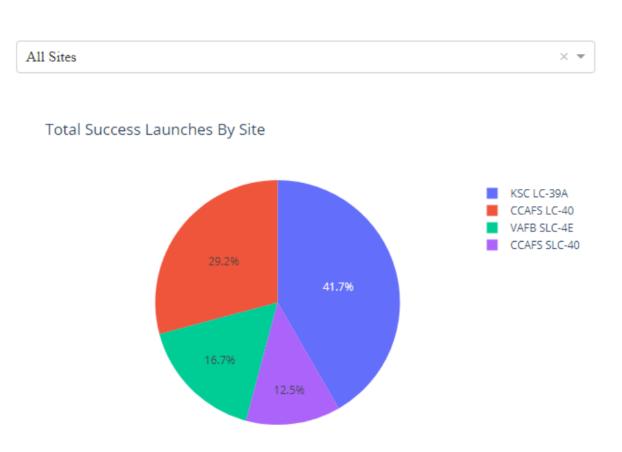

Launch Success Count for All Sites

- The dropdown menu allows the selection of one or all launch sites.
- With all launch sites selected, the pie chart displays the distribution of successful Falcon 9 first stage landing outcomes between the different launch sites.
- The greatest share of successful Falcon 9 first stage landing outcomes (at 41.7% of the total) occurred at KSC LC-39A.

SpaceX Launch Records Dashboard

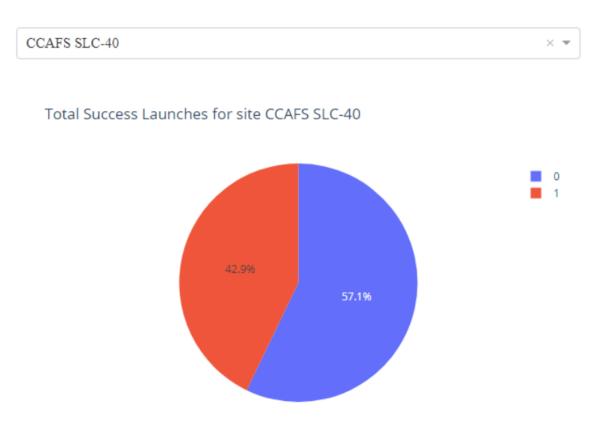

Launch Site with the Highest Launch Success Ratio

- Falcon 9 first stage failed landings are indicated by the '0' Class (blue wedge in the pie chart) and successful landings by the '1' Class (red wedge in the pie chart).
- CCAFS SLC-40 was the launch site that had the highest Falcon 9 first stage landing success rate (42.9%).

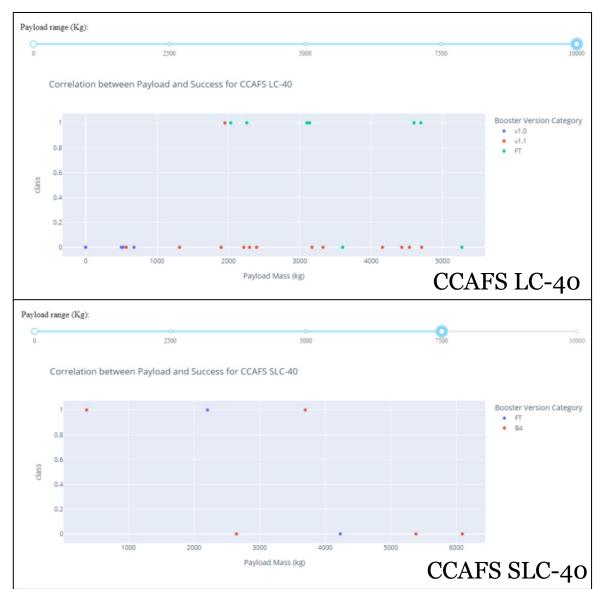

SpaceX Launch Records Dashboard

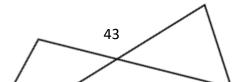

Payload vs. Launch Outcome

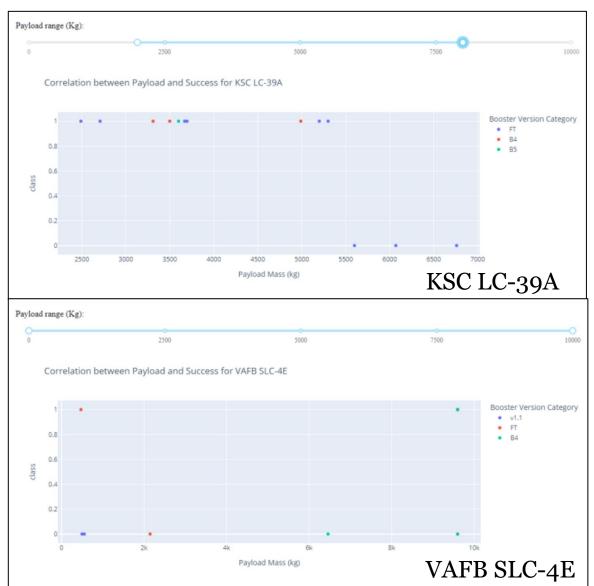

- These are the Payload vs. Launch
 Outcome scatter plots for all sites,
 with different payload selected in
 the range slider.
- The payload range from about 2,000 kg to 5,000 kg has the largest success rate.
- The largest success rate is the 'FT' booster

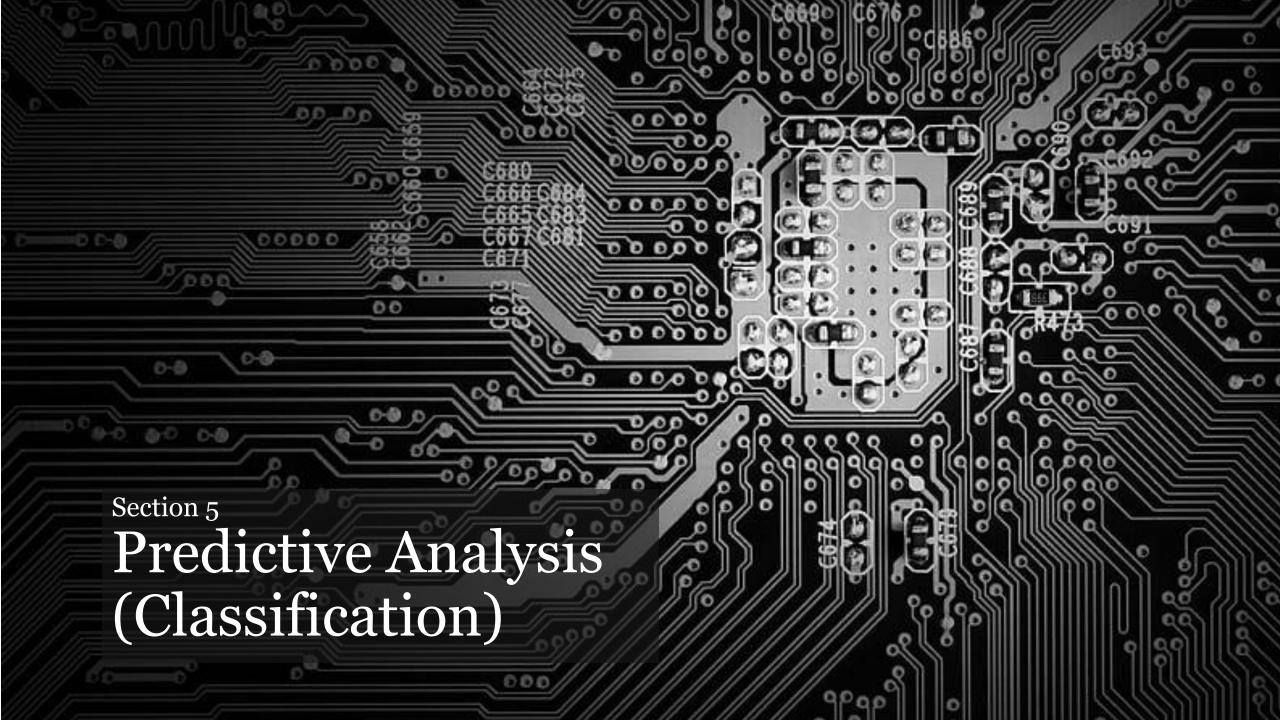

Payload vs. Launch Outcome

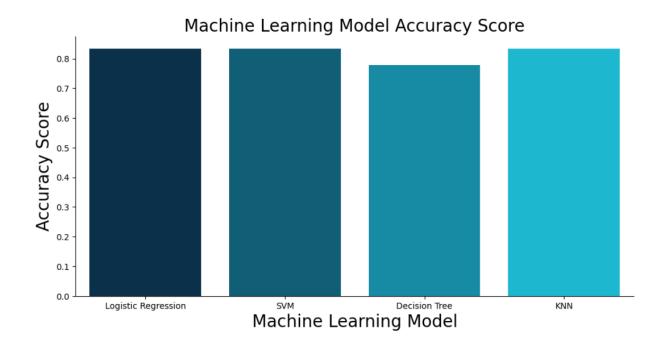

- These are the Payload vs. Launch
 Outcome scatter plots for all sites,
 with different payload selected in
 the range slider.
- The payload range from about 2,000 kg to 5,000 kg has the largest success rate.
- The largest success rate is the 'FT' booster

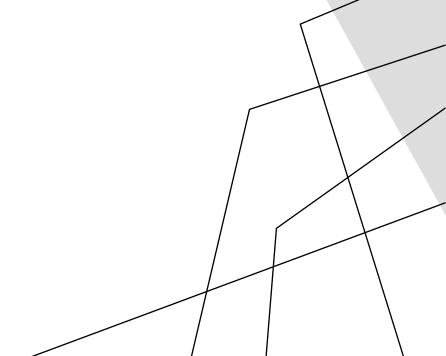

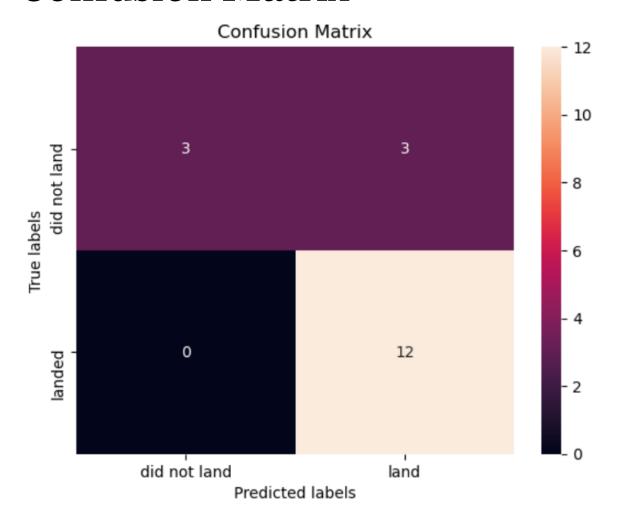

Classification Accuracy

• All models performed equally well except for the Decision Tree model in relation to other models.

Confusion Matrix

• Confusion matrices can be read as:

True	False
Negative	Positive
False	True
Negative	Positive

- Prediction Breakdown is shown as below:
 - 3 False Positives and o False Negatives
 - 12 True Positives and 3 True Negatives

Conclusions

• SpaceX has shown significant improvement of Falcon 9 first stage landing outcome over the years. This goes along with frequent launches, as the saying goes "practice makes perfect".

• Falcon 9 has never had a perfect track record of performing stage landing outcomes.

• Machine learning models are very useful when it concerns first stage landing. It can be further explored to predict future SpaceX Falcon 9 or any rockets' first stage landing outcomes.
